THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone conversation with Jeffrey J. Chapp on November 17, 2009.

The application has been amended **IN THE CLAIMS** as follows:

Claims 8, 16, 22, 30, 38, 44, 52, 60, and 66 are cancelled.

Claim 1 is amended to read:

A resynchronization device for a network device, said network device including a transmitter and a receiver, said resynchronization device comprising:

a detector that detects faulty code groups received by said receiver;

a counter that counts said faulty code groups that are detected during a predetermined period; and

a resynchronization trigger that asserts a resynchronization signal if said counter exceeds a predetermined threshold greater than 1 during said predetermined period, wherein;

said faulty code groups include idle code groups that match idle code groups generated by said transmitter of said network device; and
said resynchronization trigger counts a number of times that said resynchronization signal is asserted without bringing down a link.

Claim 9 is amended to depend on claim 1 instead of claim 8.

Claim 10 is amended to depend on claim 1 instead of claim 4.

Claim 11 is amended to read:

A false carrier resynchronization device for a network device, said network device including a transmitter and a receiver, said false carrier resynchronization device comprising:

a false carrier detector that detects false carriers received by said receiver;
a counter that counts said false carriers that are detected by said false carrier detector during a predetermined period; and
a resynchronization trigger that asserts a resynchronization signal if said counter exceeds a predetermined threshold during said predetermined period,
wherein said resynchronization trigger counts a number of times that said resynchronization signal is asserted without bringing down the link.

Claim 17 is amended to read:

A descrambler resynchronization device for a network device, said network device including a transmitter and a receiver, said descrambler resynchronization device comprising:

a descrambler detector that detects idle code groups that match idle code groups generated by said transmitter of said network device;

a counter that counts said matching idle code groups that are detected by said descrambler detector during a predetermined period; and

a resynchronization trigger that asserts a resynchronization signal if said counter exceeds a predetermined threshold during said predetermined period,

wherein said resynchronization trigger counts a number of times that said resynchronization signal is asserted without bringing down the link.

Claim 23 is amended to read:

A resynchronization device for a network device, said network device including a transmitter and a receiver, said resynchronization device comprising:

detecting means for detecting faulty code groups received by said receiver;

counting means for counting said faulty code groups that are detected during a predetermined period; and

trigger means for asserting a resynchronization signal if said counting means exceeds a predetermined threshold greater than 1 during said predetermined period,

wherein:

said faulty code groups include idle code groups that match idle code groups generated by said transmitter of said network device; and

said trigger means counts a number of times that said resynchronization signal is asserted without bringing down a link.

Claim 31 is amended to depend on claim 23 instead of claim 30.

Claim 32 is amended to depend on claim 23 instead of claim 26.

Claim 33 is amended to read:

A false carrier resynchronization device for network device, said network device including a transmitter and a receiver, said false carrier resynchronization comprising:

false carrier detecting means for detecting false carriers received by said receiver;

counting means for counting said false carriers that are detected by said false carrier detecting means during a predetermined period; and

trigger means for asserting a resynchronization signal if said counting means exceeds a predetermined threshold during said predetermined period,

wherein said trigger means counts a number of times that said resynchronization signal is asserted without bringing down the link.

Claim 39 is amended to read:

A descrambler resynchronization device for network device, said network device including a transmitter and a receiver, said resynchronization device comprising:

descrambler detecting means for detecting idle code groups that match idle code groups generated by said transmitter of said network device;

counting means for counting said matching idle code groups that are detected by said descrambler detecting means during a predetermined period; and

trigger means for asserting a resynchronization signal if said counting means exceeds a predetermined threshold during said predetermined period,

wherein said trigger means asserts said resynchronization signal a predetermined number of times without bringing down the link.

Claim 45 is amended to read:

A method for resynchronizing a network device, said network device including a transmitter and a receiver, said method comprising:

detecting faulty code groups received by said receiver;

counting said faulty code groups that are detected during a predetermined period;

asserting a resynchronization signal if said count exceeds a predetermined threshold greater than 1 during said predetermined period; and

counting a number of times that said resynchronization signal is asserted without bringing down the link,

wherein said faulty code groups include idle code groups that match idle code groups generated by said transmitter of said network device.

Claim 53 is amended to depend on claim 45 instead of claim 52.

Claim 54 is amended to depend on claim 45 instead of claim 48.

Claim 55 is amended to read:

A method for providing false carrier resynchronization in a network device, said network device including a transmitter and a receiver, said method comprising:

- detecting false carriers received by said receiver;
- counting said false carriers that are detected during a predetermined period;
- asserting a resynchronization signal if said count exceeds a predetermined threshold during said predetermined period; and
- counting a number of times that said resynchronization signal is asserted without bringing down the link.

Claim 61 is amended to read:

A method for providing descrambler resynchronization in a network device, said network device including a transmitter and a receiver, said method comprising:

- detecting idle code groups that match idle code groups generated by said transmitter of said network device;

counting said matching idle code groups that are detected during a predetermined period;

asserting a resynchronization signal if said count exceeds a predetermined threshold during said predetermined period; and

counting a number of times that said resynchronization signal is asserted without bringing down the link.
